

Santa Lucia Preserve Prohibited Plant List December 6, 2017

This prohibited plant list is an attempt to prevent the destruction of our natural wildlands by ornamental plants which have been found to become invasive to California native plant communities. Once escaped invasive species have been shown to form monocultures over time threatening the biodiversity and resources of native plant communities. Potentially invasive ornamental plants are reported by the California Invasive Plant Council (<http://www.cal-ipc.org/ip/inventory/weedlist.php>), the California Department of Food and Agriculture (<http://www.cdfa.ca.gov/PHPPS/>), and other reputable sources.

This list reflects the current state of information, and is regularly updated to reflect current information. Please request a current version from the Santa Lucia Conservancy or the Design Review Board.

If you have questions regarding the species on this list, please contact the Santa Lucia Conservancy at (831) 626-8595, cfischer@slconservancy.org.

In 2013, the Conservancy created a “Watch List” which includes common ornamental species, which are already widely planted, and are just now showing signs of becoming invasive. These Watch List species, which are listed here, are prohibited from all new landscape plantings, and will be prohibited from all landscapes if found to be invasive in natural areas in the region.
