A Guide to Mapping GPS Receivers

Gotcha!

A researcher holds juvenile California red-legged frogs (*Rana draytonii*) as part of an annual survey of these and California tiger salamanders (*Ambystoma californiense*). The survey is part of a larger study to determine how conservation grazing can be used to restore degraded livestock ponds and rangeland habitat, essential for these two species. Photo by Christy Wyckoff, Senior Wildlife Ecologist at California's Santa Lucia Conservancy.
